Key Parts of Project Management plan (1 slide)

- GitHub
    - Version control for code.
    - Easy to use.
- Trello
    - Easy communication between members.
    - Keeps tasks in an organized fashion.

Key Parts of Quality Assurance (1 slide)

- Code review – Make sure it works, *correctly*!
- Extensive testing of code modules.
- Frequent meetings with customer to ensure they get what they want:
    - Provide updates.
    - Instant feedback and ability to adjust certain aspects, if needed.

List of resources required and where they will come from (1 slide)

(I can't think of anything other than the server for this slide without being redundant by mentioning things like GitHub, or Django, which have been used it previous slides)

- Dedicated server, provided by department.

Alpha & Beta schedules (1 slide)

- *Alpha Roadmap*
    - Implement core features.
    - Provide basic, but overall, functionality required to operate.
- *Beta Roadmap*
    - Refine, refine, and refine!
    - Implement additional complimentary features:
        - Data analysis.
        - Advanced grading functionality (randomize order, select only certain questions, etc.).
    - Make it look **great**.

Risks (1-2 slides) *(I'd say this is 1 slide)*

- Important factors*, highest* priority risks
    - Making sure tests can be mapped to the correct student.
    - Adapting to handle any test format
- Making sure modules fit together and work together in harmony.
